

Cookies and local storage policy

Version: 1.0

Last updated: 24 August 2026

What is stored in the browser and how consent is controlled.

Essential storage

The site uses localStorage for theme, language and job_ftch_consent. These values preserve interface choices and are not used for advertising profiles.

Analytics

Google Analytics and Yandex Metrika load only when production IDs are configured and analytics consent was granted. Refusal does not affect access.

Control

Clear this site's browser data to reset the choice. The consent notice will appear again.

Current status

Google Analytics and Yandex Metrika integrations exist in code but do not operate without counter IDs. Analytics is disabled locally. In production each provider script loads only after consent.
