

Privacy and personal data policy

Version: 1.0

Last updated: 24 August 2026

What the site may process, why, on which basis, and how data-subject rights can be exercised.

1. Controller and scope

Effective 24 August 2026.

Website operator and project maintainer: the owner of the `job_ftch` repository (GitHub: letya999). Send requests through the maintainer contact listed in the repository. Do not place personal data in public GitHub issues.

This policy applies to the public `job_ftch` website, read-only API and documentation. It does not govern third-party vacancy sites or Telegram.

2. Data categories

There is no user registration. The site may process IP addresses and security logs at infrastructure level; URL, referrer, browser, device and pseudonymous events only after analytics consent; language, theme and consent choices locally in the browser.

The site does not request payment, passport, health, biometric or other special-category data.

3. Purposes and legal bases

Technical logs support delivery, abuse prevention, diagnostics and API security under operational necessity and legitimate security interests. Analytics relies on explicit consent.

Refusing or withdrawing consent does not restrict core access.

4. Recipients and international transfers

When configured, Google Analytics and Yandex Metrika may receive analytics data under their terms. Their scripts do not load before consent. Hosting and network providers may process technical logs.

The operator must verify hosting location and transfer safeguards before production analytics is enabled.

5. Retention, deletion and security

Browser preferences remain until cleared. Infrastructure logs should be retained only as necessary, with 30 days as the recommended ceiling. Analytics retention is configured with each

provider.

Controls include data minimisation, read-only APIs, tenant allowlisting, rate limits, caching and prior consent.

6. Data-subject rights

Where applicable, users may request information, access, correction, erasure, restriction, objection and consent withdrawal. Delete `job_ftch_consent` from `localStorage` to reset analytics consent and contact the controller for other requests.

Users may complain to a competent authority. Russian users are covered by applicable 152-FZ rules; EEA users by applicable GDPR provisions.

7. Vacancy and source data

The service indexes job-search information made public by sources: role, organisation, terms, geography, compensation and source URL. Personal contact details must not be republished beyond necessity and may be removed or redacted after a substantiated request.

The operator acquires no ownership of source data and does not use it for candidate profiling, credit scoring or decisions producing legal effects.

8. Requests, removal and changes

A rights holder, data subject or source representative may request correction, removal or de-indexing by identifying the URL, legal basis and contact method. Access may be restricted while a dispute is reviewed.

Before public production deployment, the owner must replace the controller description with a full legal name, address and working privacy contact.
